ARMOUR
SYSTEMS

RETAIL

Armour Systems reputation for high quality museum showcases, engineered to perform for many years, gives Armour's retail customers confidence to commission new or customised solutions for their own environments.

From the first meeting, clients become involved with the design process through to the realisation of their ideas.

Armour Systems designs precision aluminium extrusions that provide the core methods of construction for its product ranges. These custom profiles backed by CNC in house manufacture of metal, timber and plastic components provide an intelligent approach to construction that guarantees high quality results.

This brochure illustrates a selection of works achieved by this approach to manufacture.

At Armour Systems we relish the difficult brief, we know our chosen industry very well and understand how to combine materials, processes and people in the right way.

Armour is well equipped to produce prototypes for customers.

Design and solid modelling, producing new aluminium extrusions, in house programming of CNC milling, routing and machining centres provides a seamless route to quantity production.

We have the skills and experience to ensure that the prototypes aren't merely more or less convincing mock-ups but real working models, of the production article.

There is no secret to maintaining tight tolerances in production; simply employ skilled people and give them the best possible equipment to work with.

Keeping ahead with the latest solid modelling software and CNC machinery, we aim to manufacture to the highest standards in the industry.

We know that maintaining consistency of production is the only sure way of ensuring a like consistency of performance-in-service for our products.

Over the years Armour has earned a reputation for quality and service of which we are justly proud.

We have found that providing this level of service, requires a 'company wide', flexible approach to all aspects of the business.

Flexibility in the organisation of meetings, the planning of installations and the physical layout of our factories, ultimately leads to customer benefits.
